SESSION 1874-75.

The Medical Department of the University of the City of New York, which was established in 1841 in the Stuyvesant Institute on Broadway, has its present site opposite the entrance to Bellevue Hospital, on Twenty-sixth Street, near the East River. The Faculty were led to the choice of a location which would be central with reference to Hospital Institutions from the early recognition in the history of the college of the importance of clinical instruction in connection with the stated branches of medical study, the provision for which was initiated in this country by its late eminent Professor of Surgery, Dr. Valentine Mott. Besides Bellevue Hospital and the Department of Outdoor Medical Charity, which are directly opposite, the College is in immediate proximity to the Ferry which communicates with the Charity Hospital and the other great public institutions on Blackwell's Island. These establishments, in connection with Bellevue, belong to the City of New York, and the Commissioners of Public Charities *have thrown them open to the students of all the medical colleges on precisely equal terms.* A ticket furnished by the Faculty of the University will enable a student to spend a large part of each day in these buildings, which contain over fifteen thousand patients annually, thus affording a field not surpassed in any other city for the study and investigation of every branch of practice, either general or special. Moreover, there are public examinations held by impartial boards twice in each year, at which twenty-four assistants are appointed to these institutions, each to serve eighteen months. The Faculty are also able to send their graduates before the Examining Boards of many other important hospitals in the city which are not supported by the public treasury.

MEDICAL DEPARTMENT.

5

SESSIONS.

THE COLLEGIATE YEAR is divided into two sessions — the Regular Winter Session, and the Spring Session. The latter is supplementary to the former, the design of the Faculty being to furnish instruction to medical students throughout the year. *Attendance on the Regular Winter Session is all that is demanded of the candidate for graduation.* Those who attend the Spring Session receive at the College Commencement, in addition to the Diploma, a CERTIFICATE OF HONOR, in virtue of their having pursued voluntarily a fuller course than usual.

SPRING AND SUMMER SESSION.

The Spring and Summer Session combines Clinical and Didactic Teaching with Daily Recitations, thus affording efficient and systematic instruction to the advanced student as well as to the beginner. Two Recitations will be held daily by Tutors in the College Building; these Recitations will embrace Surgery, Anatomy, Practice of Medicine, Physiology, Chemistry, Materia Medica, Obstetrics, and Histology. One Didactic Lecture will be given daily in the College Building by the Professors of the Regular Faculty. Two Clinical Lectures will be given daily, either at Bellevue or Charity Hospitals, or the Manhattan Eye and Ear Hospital. The Dissecting-Room will be open during the first two months of the Session, under the personal direction and superintendence of the Professor of Anatomy. Both the Chemical and Physiological Laboratories will be open during the Session for practical instruction in those branches.

This course begins in the second week of March, and ends the first of June, when the Summer Commencement is held.

PRELIMINARY WINTER SESSION.

The Preliminary Term commences on Wednesday, Sept. 16, 1874, and continues until the opening of the Regular Session. The Lectures in this Term, both Clinical and Didactic, will be the same in number and order as during the Winter Session, and will be given by the Professors of the Regular Faculty.

ANNUAL ANNOUNCEMENT
AND
CATALOGUE.

SESSION 1874-75.

The Medical Department of the University of the City of New York, which was established in 1841 in the Stuyvesant Institute on Broadway, has its present site opposite the entrance to Bellevue Hospital, on Twenty-sixth Street, near the East River. The Faculty were led to the choice of a location which would be central with reference to Hospital Institutions from the early recognition in the history of the college of the importance of clinical instruction in connection with the stated branches of medical study, the provision for which was initiated in this country by its late eminent Professor of Surgery, Dr. Valentine Mott. Besides Bellevue Hospital and the Department of Outdoor Medical Charity, which are directly opposite, the College is in immediate proximity to the Ferry which communicates with the Charity Hospital and the other great public institutions on Blackwell's Island. These establishments, in connection with Bellevue, belong to the City of New York, and the Commissioners of Public Charities *have thrown them open to the students of all the medical colleges on precisely equal terms.* A ticket furnished by the Faculty of the University will enable a student to spend a large part of each day in these buildings, which contain over fifteen thousand patients annually, thus affording a field not surpassed in any other city for the study and investigation of every branch of practice, either general or special. Moreover, there are public examinations held by impartial boards twice in each year, at which twenty-four assistants are appointed to these institutions, each to serve eighteen months. The Faculty are also able to send their graduates before the Examining Boards of many other important hospitals in the city which are not supported by the public treasury.

SESSIONS.

THE COLLEGIATE YEAR is divided into two sessions — the Regular Winter Session, and the Spring Session. The latter is supplementary to the former, the design of the Faculty being to furnish instruction to medical students throughout the year. *Attendance on the Regular Winter Session is all that is demanded of the candidate for graduation.* Those who attend the Spring Session receive at the College Commencement, in addition to the Diploma, a CERTIFICATE OF HONOR, in virtue of their having pursued voluntarily a fuller course than usual.

SPRING AND SUMMER SESSION.

The Spring and Summer Session combines Clinical and Didactic Teaching with Daily Recitations, thus affording efficient and systematic instruction to the advanced student as well as to the beginner. Two Recitations will be held daily by Tutors in the College Building; these Recitations will embrace Surgery, Anatomy, Practice of Medicine, Physiology, Chemistry, Materia Medica, Obstetrics, and Histology. One Didactic Lecture will be given daily in the College Building by the Professors of the Regular Faculty. Two Clinical Lectures will be given daily, either at Bellevue or Charity Hospitals, or the Manhattan Eye and Ear Hospital. The Dissecting-Room will be open during the first two months of the Session, under the personal direction and superintendence of the Professor of Anatomy. Both the Chemical and Physiological Laboratories will be open during the Session for practical instruction in those branches.

This course begins in the second week of March, and ends the first of June, when the Summer Commencement is held.

PRELIMINARY WINTER SESSION.

The Preliminary Term commences on Wednesday, Sept. 16, 1874, and continues until the opening of the Regular Session. The Lectures in this Term, both Clinical and Didactic, will be the same in number and order as during the Winter Session, and will be given by the Professors of the Regular Faculty.

The subjects of the Lectures will be introductory to those of the Regular Course. Attendance on this Term is optional with the Student, and is not a requisite for graduation, but the Faculty earnestly hope that the Students will avail themselves of the advantages afforded by this practical course.

REGULAR WINTER SESSION.

The Regular Winter Course occupies four and one-half months, commencing on Wednesday, September 30, 1874, and continuing to the middle of February, 1875. The System of Instruction for the coming Session will be as follows:—

From four to five Didactic Lectures will be given each day in the College Building, and will embrace a thorough course in Medicine and Surgery, both elementary and practical. Two Clinical Lectures will also be given each day, one of which will be a hospital clinic in the Amphitheatre of either Bellevue, Charity, Roosevelt, or the Presbyterian Hospitals, or in the Manhattan Eye and Ear Hospital. The other will be given in the College Amphitheatre, and embraces cases furnished by the different Dispensaries of the city.

The Faculty having recently established Professorships in Special Departments of Medicine and Surgery, Lectures will be given during the Winter Session upon those subjects which are now regarded as specialties.

CLINICAL INSTRUCTION IN HOSPITALS.

The resources of New York for instruction in hospitals, to all of which tickets are issued to students of the University, are as follows:—

BELLEVUE HOSPITAL, immediately opposite the University, contains more medical cases than any other hospital in the country. More than seven thousand cases were received last year, and all forms of diseases and injury (except contagious disorders, which are treated on Blackwell's Island) are accessible to students. All the clinics held in the buildings, including those of the Professors of the University, are open to University students daily. All the surgical operations of importance are performed publicly in the

Amphitheatre. Twelve Junior Assistants are appointed by competitive examination each year.

CHARITY HOSPITAL, on Blackwell's Island. The ferry is a few steps from the University, and the passage and entrance-ticket are furnished by the Faculty. It usually contains eight hundred patients, a large proportion being cases of syphilitic disease, both in males and females, and genito-urinary and uterine diseases. Several of the Professors and staff of the University are connected with this charity, and students will have every facility for study and examination. Twelve Junior Assistants are appointed by competitive examination each year.

In addition to these, there are under the control of the New York City Board of Commissioners of Public Charities and Correction, and accessible to students, the FEVER and SMALL-POX hospitals, the hospital for EPILEPTICS and PARALYTICS, the NURSERY HOSPITAL, the INSANE ASYLUM, and the Bureau of Relief for the OUT-DOOR POOR. This last, in which gratuitous advice and medicine are given to walking cases of disease, is opposite the University Medical College on Twenty-sixth Street, and can be visited by its students every day.

The ROOSEVELT HOSPITAL in Fifty-ninth Street, and the PRESBYTERIAN HOSPITAL in Seventy-third Street, have recently been opened for the reception of patients; and in these institutions Profs. Post and Mason will perform operations before the class during the Winter Session.

Besides the above advantages, the students of the University have access to the MANHATTAN EYE AND EAR HOSPITAL, of which Profs. Roosa and Pardee are Surgeons, and where 2,500 new patients are treated annually, and over 500 operations performed. A daily Clinic is held, and regular instruction given in the diagnosis and treatment of Diseases of the Eye and Ear, and in the use of the Ophthalmoscope. In addition, there is a Clinic for diseases of the Throat, where practical laryngoscopy is taught. Also to the NEW YORK EYE AND EAR INFIRMARY, the ST. VINCENT'S HOSPITAL, the JEWS' HOSPITAL, ST. LUKE'S HOSPITAL, the CHILDREN'S HOSPITAL, the COLORED HOME, the WOMAN'S HOSPITAL, the LYING-IN ASYLUM, the EMIGRANT'S HOSPITAL, etc., etc.

In the *Dispensaries* of the city there is also a wide field for practical observation, without charge. Some idea may be formed of the value of these Dispensaries when it is stated that they treat every year more than eighty thousand patients. The diseases are arranged in distinct classes, such as those of the head, chest, abdomen, extremities, fevers, eruptive diseases. Auscultation and Percussion may be practised to any extent.

The extraordinary facilities and advantages presented by the City of New York for the acquisition of practical knowledge in medicine and surgery strongly recommend it to the attention of the *medical profession* and to students. The University led the way in inaugurating and developing these great advantages, and its Faculty will continue to make them as available as possible.

CLINICAL INSTRUCTION IN THE COLLEGE BUILDING.

Besides the Clinical Lectures given in the hospitals, there are seven Clinics each week in the College building, as follows:—

A Medical Clinic, by Prof. Loomis, every Monday, at 11 A.M.

A Clinic for Diseases of the Skin, by Prof. Piffard, every Tuesday, at 12 M.

A Clinic for Diseases of Women, by Prof. Kammerer, every Wednesday, at 12 M.

A Surgical Clinic, by Prof. Post, every Saturday, at 12 M.

A Medical Clinic, by Prof. Thomson, every Friday, at 11 A.M.

A Clinic for Diseases of Children, by Dr. Ripley, on Fridays, at 1½ P.M.

A Clinic for Diseases of the Eye and Ear, by Prof. Roosa, every Wednesday, at 1½ P.M.

PRACTICAL ANATOMY.

The supply of DISSECTING MATERIAL is abundant, and is furnished to matriculants of the University *free of charge*. The Anatomical Room in the College building is large, well lighted and ventilated, and is supplied with everything requisite for the convenience and comfort of the student, and will be under the

immediate direction and superintendence of the Professor of Anatomy, who devotes a large part of his time to demonstration. The Dissecting-Room will be open from the last of September until the middle of May.

MORBID ANATOMY.

Students of the University will have free access to the Post-mortem Rooms of Bellevue and Charity Hospitals, where Examinations are made daily by the Curators.

The large number of Coroner's Cases affords illustrations of topics relating to Medical and Surgical Jurisprudence. Coroners' Inquests are also made from time to time before the class.

SURGERY.

Operations will be daily performed by Professors Post, Mason, and Smith, at Bellevue, Charity, Roosevelt, and Presbyterian Hospitals, and in the College Building.

Professor Stephen Smith, late Professor of Anatomy in Bellevue Hospital Medical College, will hold Surgical Clinics in Bellevue Hospital during the Session.

Professor John T. Darby, late Professor of Anatomy and Surgery in the University of South Carolina, will give a course of lectures on Surgical Anatomy; also, Professor F. D. Weisse, on Surgical Pathology.

A special course of Operative Surgery on the Cadaver will be given by Professors Post and Mason.

OBSTETRICS AND DISEASES OF WOMEN AND CHILDREN.

The Department of Obstetrics is illustrated by paintings and preparations, and by cases in the College Building and Hospitals. The principal operations are performed each Session before the class, and this important branch of the medical art can be studied as a specialty.

An Obstetrical Clinic will be held each week by Professors Budd and Gillette.

Second-Course Students will be provided with cases of labor, of which they take the entire control, unless the cases are complicated, when the Professor of Obstetrics or his Adjunct will assist them.

Besides the Clinic of Professor Kammerer on Diseases of Women, a special course of lectures on the Surgical Diseases of Women will be delivered by Professor Montrose A. Pallen, late Professor of Anatomy in the Missouri Medical College, and of Gynæcology in the College of Physicians and Surgeons of St. Louis.

Diseases of Children will be illustrated at a Weekly Clinic throughout the Session.

CHEMISTRY.

The Professor of Chemistry, aided by a good collection of apparatus, gives special attention to those branches of his subject which are of importance to physicians. He devotes a part of the course to Toxicology, and has frequent opportunities of illustration by practical cases. He also has personal charge of the Laboratory, where Students may become familiar with chemical manipulations at a trifling expense.

PRACTICAL MEDICINE.

In addition to the Didactic and Clinical Lectures on Pathology and Practical Medicine given in the College Building, Professor Loomis will organize a Diagnosis Class, to be held in the Amphitheatre of Bellevue Hospital on Tuesday of each week, when students will examine patients and make diagnoses before the class.

PHYSIOLOGY.

Professor Arnold will during the course give a full series of experiments, consisting of vivisections, enlargements on the screen with the stereopticon, the electric microscope, the megascope, etc. The circulation and heart's action will be demon-

strated by means of Marrey's apparatus, or the graphic method. Suitable instruments will be made use of for illustrating the physiology of the nervous system. Chemical and mechanical problems in their physiological bearings will receive marked attention.

MATERIA MEDICA AND THERAPEUTICS.

In this course special attention is directed to those Remedial Agents which are not Medicines, and the action of Medicines Proper, with particular reference to their practical application.

Professor Thomson holds a Clinic each week in Charity and Roosevelt Hospitals, and another in the College Building, at which special attention will be given to cases of nervous disease.

SURGICAL JURISPRUDENCE.

The Faculty take pleasure in announcing that, by the appointment of Professor Stephen Smith, they have secured the services of a teacher specially qualified for imparting instruction on this important subject.

The Lectures will consist of a critical examination of all those questions in practical surgery which have been, or which may become, subjects of judicial inquiry in suits for alleged malpractice. The course will be eminently practical, the special design being to establish what is and what is not malpractice in every branch of surgery.

DISEASES OF THE MIND AND NERVOUS SYSTEM.

The department of Diseases of the Mind and Nervous System has been filled by the appointment of Dr. William A. Hammond, late Professor in Bellevue Hospital Medical College, who will deliver both didactic and clinical lectures, in which the affections of the mind and nervous system will be fully considered in all their theoretical and practical relations. Electricity in its application to neurological medicine will in this connection receive special attention.

OPHTHALMOLOGY AND OTOTOLOGY.

Professors Roosa and Pardee will give a course of Didactic Lectures on these subjects in the College Building, which will be further illustrated by Clinical Lectures in the Manhattan Eye and Ear Hospital.

DERMATOLOGY.

Professor Piffard will give a Didactic and Clinical Course on Diseases of the Skin, which will be illustrated in the completest manner, both by selected cases and preparations.

MOTT PRIZE MEDALS.

By the will of the late venerable Dr. Valentine Mott, who was one of the founders of this College, and for many years its President and Professor of Surgery, perpetual provision was made for the following medals:—

A gold medal to the candidate who shall prepare the best dried anatomical or anatomico-surgical preparation.

A silver medal to the second best of that description.

A bronze medal to the candidate who shall furnish the best book of recorded cases and remarks of the Professor of either of the Surgical Clinics.

Candidates for graduation, as well as first and second course students, may compete for these medals.

The preparations shall belong to the University Mott Prize Museum, and be labeled with the name of the maker.

The volume of cases shall also belong to, and be deposited in, the Museum.

The medals to be announced by the Chancellor, and presented to the successful candidates, at the Spring Commencement of the College.

The medals not to be awarded, except the specimens presented are of sufficiently good character.

These prizes were awarded at the last commencement as follows:—

The gold medal to John Wilbur, of R. I.; the silver medal to George A. Balcom, of N. S.; the bronze medal to Seymour B. Young, of Utah.

FACULTY PRIZES FOR PUBLIC COMPETITIVE EXAMINATIONS.

The following named Professors offer to award Prizes at the March Commencement to those members of the Graduating Class who have passed the best examinations in their several departments.

These examinations will be held in public at the close of the Lecture Term, and the award made by Committees appointed from the Alumni Association. Candidates for these Prizes must have secured the highest marks of the Professors who offer them in the stated examinations for the College Degree.

1. Prize by Prof. Budd, for the best examination in Obstetrics.
2. Prize by Prof. Loomis, for the best examination in Pathology and Practical Medicine.
3. Prize by Prof. Thomson, for the best examination on Materia Medica and Therapeutics.
4. Prize by Prof. Roosa, for the best examination on Diseases of the Eye and Ear.
5. Prize by Prof. Arnold, for the best examination on Physiology.
6. Prize by Prof. Elsberg, for the best examination in Laryngology and Diseases of the Throat.
7. Prize by Dr. Pallen, for the best examination in the Surgical Diseases of Women.
8. Prof. Weisse also offers a Prize for the best written Report of his Clinical Lectures.
9. Mr. James Bryce, of this city, will give a prize of fifty dollars (\$50) for the best thesis upon any subject connected with Obstetric Medicine. The decision to be made by the Professor of Midwifery and his Adjunct, and the Professor of Diseases of Women.

These Prizes were awarded at the last Commencement, as follows:—

- The Budd Prize to F. C. Ainsworth, of Vt.
- The Loomis Prize to F. C. Ainsworth, of Vt.
- The Thomson Prize to J. F. Carreau, of N. Y.
- The Roosa Prize to H. F. Kingsley, of N. Y.
- The Arnold Prize to I. Gutierrez, of U. S. of Columbia.
- The Elsberg Prize to P. J. Keegan, of R. I.
- The Bryce Prize to I. Gutierrez, of U. S. of Columbia.

REQUIREMENTS FOR GRADUATION.

Candidates for the degree of Doctor of Medicine must have attended two full courses of Lectures—the *latter* in this College. They must have studied medicine three years, under the direction of a regular physician or surgeon, and have attained the age of twenty-one years. Each candidate is required to write a medical thesis, and to deposit it with the Dean of the Faculty. Full certificates of the time of study, of age, and of moral character must also be furnished.

He must be examined separately by the Professors of Surgery, Obstetrics, Chemistry, Practice of Medicine, Anatomy, Physiology, and Materia Medica.

Two commencements take place annually in the University, at either of which the candidates who have complied with the above requisitions may graduate.

The first is in the middle of February, the second about the middle of June.

FEEES FOR THE WINTER COURSE.

Matriculation Fee, \$5.

Fees for the full Course of Lectures by all the Professors \$140; for each separate ticket, \$20.

Ticket of the Demonstrator of Anatomy, \$10.

Graduation Fee, \$30.

The tickets are to be taken out at the beginning of the Session.

Students who have already attended two full courses of lectures in other regular schools, and recent graduates, are admitted on paying the matriculation fee and \$70.

Students who have attended two full courses in this College, or who, having attended one full course in some regularly established medical school, shall *subsequently* attend one full course in this College, are admitted to a third course of lectures on paying the matriculation fees only.

GRADUATES of this school, of other regular schools who have been in practice three years, and *Theological Students*, are admitted on general ticket, by paying matriculation fee.

FEEES FOR THE SPRING COURSE.

Students who have attended the Winter Course of lectures will be admitted to the Spring and Summer Course *free of charge*, except the matriculation fee. Those who have not attended the Winter Course will be admitted on payment of the matriculation fee and \$30; and, should they decide to become pupils of the University for the Winter Course ensuing, the \$35 thus paid will be credited to them on taking out their tickets for that course. The student will therefore gain in this manner seven months' instruction free of cost. A laboratory fee of \$5 is charged for the Spring Course.

The Diploma of the University is recognized by the Royal College of Surgeons, England.

BENEFICIARY FOUNDATION.

For the purpose of assisting meritorious individuals, the Faculty will receive annually a limited number of beneficiaries, each of whom will be required to pay \$43 and the matriculation fee toward the expenses of the institution. The sons of physicians and clergymen, other things being equal, will be considered as having a preferred claim. Those who are desirous of availing themselves of this foundation will present to the Registrar of the Faculty, during the summer, satisfactory documents, showing

them to be persons of good moral character, of appropriate elementary education, and in circumstances which require this assistance.

PRIVATE INSTRUCTION.

Special courses are given by members of the Faculty and others to private classes.

Prof. Darling will give private instruction in Latin and Anatomy.

Prof. Draper in Chemistry.

Prof. Loomis will continue to instruct private classes in Physical Diagnosis.

Professors Mason and Howe will give private instruction in Clinical and Operative Surgery.

Students desiring private instruction and examination on the subjects treated in the lectures may avail themselves of the classes of Dr. P. A. Aylett, to whom application may be made for terms and other particulars.

BOARDING.

The expenses of living in the City of New York have heretofore deterred many medical students from availing themselves of the great clinical advantages offered by the Faculty of the University.

Arrangements have now been made by the Registrar so that each matriculant of the College will be furnished with good board, including room-rent, at a convenient distance from the College Building, at the very low rate of \$5 per week. The Janitor has positive instructions to furnish boarding-houses to none except matriculants in the University.

For further particulars, address

Prof. CHARLES INSLEE PARDEE, M.D., Registrar,

University Medical College, 426 East 26th Street,

NEW YORK CITY.
