THE NEW YORK Post-Graduate Medical School and Hospital,

No. 226 East 20th Street,

Between Second and Third Avenues,

NEW YORK CITY.

ANNOUNCEMENT OF THE FOURTH YEAR,

WITH A REPORT OF THE DISPENSARY AND HOSPITAL.

SESSIONS OF 1885-'86.
FORM OF A REQUEST
TO THE
NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.

I give and bequeath to the Trustees of the NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL the sum of ____________________________ Dollars, to be applied to the charitable uses of the Institution.

ARCHIVES

A
1885-86
SENeca D. POWELL, M.D.,
Professor of Minor Surgery.

HORACE T. HANs, M.D.,
Professor of the Diseases of Women; Assistant Surgeon to the Woman's Hospital.

GRAEME M. HAMMOND, M.D.,
Associate Professor of Diseases of the Mind and Nervous System and of Medical Electricity. Physician to the Metropolitan Throat Hospital (Nervous Department).

LEWIS F. PILCHER, M.D.,
Professor of Clinical Surgery.

HERBERT G. LYTLE, M.D.,
Associate Professor of Genito-Urinary and Venereal Diseases.

J. R. NILSEN, M.D.,
Associate Professor of Diseases of Women.

GEORGE E. HOPE, M.D.,
Associate Professor of Diseases of the Nose and Throat; Attending Surgeon to the Metropolitan Throat Hospital.

W. DUNCAN McKIM, M.D.,
Instructor in the Anatomical basis of Gynecology.

A. F. BUECHLER, M.D.,
Instructor in Venereal Diseases; Physician to the German Poliklinik.

J. B. EMERSON, M.D.,
Instructor in Diseases of the Eye and Ear; Assistant Surgeon to the Manhattan Eye and Ear Hospital.

S. J. McNUTT, M.D.,
Instructor in Diseases of Children; Visiting Physician to the New York Infirmary; Attending Physician to the Out Department, N. Y. Infirmary.

FRANCIS VALK, M.D.,
Instructor in Diseases of the Eye; Assistant Surgeon to the Manhattan Eye and Ear Hospital.

CHARLES H. BROWN, M.D.,
Instructor in Medical Electricity.

WILLIAM M. LEBZINSKY, M.D.,
Instructor in Mental and Nervous Diseases; Attending Physician to the Demilit Dispensary (Nervous Department), etc.

GEORGE E. MUNROE, M.D.,
Instructor in Diseases of Women.

G. R. ELLIOTT, M.D.,
Instructor in Orthopaedic Surgery and Mechanical Therapeutics.

HOWARD E. AMES, M.D., U. S. N.,
Instructor in Naval and Military Hygiene.

H. B. McCARROLL, M.D.,
Instructor in Urinary Analysis.

J. K. BAILEY, M.D.,
Instructor in Urinary Analysis.

HENRY D. CHAPIN, M.D.,
Instructor in Diseases of Children; Physician to the Out-door Poor Department of Bellevue Hospital.

WILLIAM K. SIMPSON, M.D.,
Instructor in Diseases of the Nose and Throat; Assistant Surgeon to the Metropolitan Throat Hospital.

SAMUEL LLOYD, M.D.,
Instructor in Clinical Surgery.

JOHN R. CONWAY, Jr., M.D.,
Instructor in Clinical Surgery.
ANNOUNCEMENT.

THE Faculty of the Post-Graduate Medical School and Hospital was the first in this county to organize a scheme of instruction adapted to graduates in Medicine. The founders of this school were for several years a post-graduate faculty in an under-graduate college in New York. They entered upon their new work with a conviction that a school entirely distinct from one for under-graduates was greatly needed. The large number of physicians who have availed themselves of the facilities now offered, and the establishment of similar schools in other cities, proves that an advanced step in medical education has actually been made, and the advantages of New York City as a medical centre greatly amplified.

The fourth year of instruction begins on September 12th, 1885. The Faculty have found their new building very well adapted to the purposes of a school for advanced medical instruction, a dispensary, and hospital. This large structure is situated in one of the healthiest locations in the city, very near to Gramercy Park, and accessible to the large hospitals. Since the last announcement, the wards and rooms of the hospital have been constantly occupied by patients, whose cases have been made available for instruction, while the dispensary has furnished ample material in ambulant patients. There are histological and pathological laboratories connected with the school, as well as one for physiological investigations. During the year, a large sum of money has been given the hospital by a benevolent lady, through one of the lecturers of the school, for the purpose of fitting up and supporting a ward for the treatment of sick children. It is believed that similar gifts will enable the Faculty at no distant day, to fully support from endowment funds a large number of beds, so that a hospital sufficient for all purposes of instruction, except in general surgery and medicine, may be found within the walls of the school.

HOSPITAL INSTRUCTIONS.

Instruction in the clinics of the school continues to be so arranged that the time from 2 until 4.30 P.M. is devoted to the large general and special hospitals, Bellevue, the Presby-
Plan of Instruction.

The plan of instruction is based upon the post-graduate methods that have been in successful operation for many years in the medical centres of the Old World, though modified, to suit the peculiar needs of American practitioners.

No under-graduates are admitted, and no degrees are conferred, but the School is open to all legalized practitioners, and it is specially available for the young graduate who wishes to acquaint himself with the practical duties of his profession, or for older practitioners who are desirous of taking up some special branch of medicine, or who wish to familiarize themselves with modern advances in diagnosis and treatment.

The Post-Graduate School is not an institution where cases are hurriedly seen or superficially examined, but an effort is made to thoroughly utilize clinical material, and to give each matriculate the most ample opportunities for making personal and deliberate examinations of individual cases.

The instruction is given by means of clinics, subjects, and specimens. There are no lectures except clinical ones, and no demonstrations without subjects and specimens, hence, it is not a mere dispensary or clinic, but a school, in which the teaching is practical and thorough.

The Dispensary and Hospital of the School, and the Hospitals to which the Instructors are attached, furnish more than 16,000 patients annually, for the illustration of General Medicine and Surgery, Mental and Nervous Diseases, Diseases of Women, Obstetrics, Genito-Urinary Diseases, Cutaneous and Syphilitic Affections, Orthopaedic Surgery, Diseases of Children, Diseases of the Eye and Ear, and of the Throat and Nose. The new Anatomical room also provides in the most satisfactory manner for studies in Practical Anatomy and Operative Surgery on the Cadaver. The Histological and Pathological Laboratories are also most thoroughly equipped.

The hospitals have also supplied all the morbid material requisite for the study of Pathological Anatomy and Histology, the products of more than two hundred post-mortems having been utilized during the regular and intermediate courses of 1885-6.

Each department of the School is open throughout the entire year, and special facilities are given to those who desire to prosecute any line of study, at any time.

No institution in this country designed for graduates in medicine, is so completely organized in all its branches, has such accommodations for patients and for instruction, or is so fully equipped with the appliances requisite for each special course.

The Clinical Society of the New York Post-Graduate Medical School.

A society with the above designation meets in the large lecture room of the School twice a month on Saturday evenings. The transactions of the Society have been of great scientific value. They are reported in the New York Medical Journal and the Boston Medical and Surgical Journal. All matriculates of the School are members of the Society. The meetings are presided over by a member of the Faculty.

School Terms.

The school year is divided into two distinct but continuous terms. The winter term begins on Tuesday, Sept. 12th, 1885, and ends on June 2d, 1886, when the summer term begins. The Faculty have found, with great satisfaction, that very few of the matriculates of the winter term of 1884-85 were in attendance less than twelve weeks, while some attended the courses of the school for six months. They have therefore arranged the schedule of instruction, so that it is practicable for a matriculate to attend all the courses of the Professors and Associate Professors, during the whole of his connection with the Post-Graduate School. They have also arranged another schedule, of a course of instruction in part by the Instructors and Members of the Dispensary Staff, as well as by the Professors, and which is adapted to those practitioners who wish to confine their studies to a very few departments, or even to one branch.

For example, if a graduate in medicine desires to study only diseases of the eye and ear, or only diseases of the skin, or any one department, opportunity will be given him, for several hours in the day, in that department in which he is interested, while, on the other hand, by following the plan as laid down in the general schedule, he may attend the clinics of every professor.

Fees.

For a period of four weeks in all the courses and clinics of
the School and Hospital, except the instruction in the Laboratories and in Operative Surgery, but including Urinary Analysis, $65.
For a course of six weeks of the same character, $100.
For a course of twelve weeks, $150.
For a course of twenty-four weeks, $250.
For the entire year, $350.

FEES FOR SEPARATE COURSES.
For six weeks' instruction in Clinical and Orthopedic Surgery, and Mechanical Therapeutics, $35
Operative Surgery, for each member of a class of five, 5
For twelve weeks in Clinical and Orthopedic Surgery, 50
For eighteen weeks, 85
For six weeks' instruction in Diseases of Women, 35
For twelve weeks, 50
For eighteen weeks, 85
For six weeks' instruction in Clinical Obstetrics, 15
For twelve weeks, 35
For six weeks' instruction in Diseases of the Nervous System and Electro-therapeutics, 20
For twelve weeks, 35
For eighteen weeks, 50
For a six weeks' course on the Anatomy and Physiology of Nervous System, 20
For twelve weeks, 35
For eighteen weeks, 50
For a course in the Operative Surgery of the Eye, 15
For a course in the Operative Surgery of the Throat and Nose, 20
For twelve weeks, 35
For eighteen weeks, 50
For six weeks' instruction in Pathology, Physical Diagnosis, and Clinical Medicine, 20
For twelve weeks, 35
For eighteen weeks, 50
For six weeks in Urinary Analysis, 15
For six weeks' instruction in Diseases of Children, 20
For twelve weeks, 35
For eighteen weeks, 50
For six weeks' instruction in Venereal Diseases, and Diseases of the Genito-Urinary System, 20
For twelve weeks, 35
For eighteen weeks, 50
For six weeks' instruction in Diseases of the Skin, 15
For twelve weeks, 25
For eighteen weeks, 35

For six weeks' instruction in Military, Naval, and State Hygiene, $20
For twelve weeks, 35
For eighteen weeks, 50

Graduates in Medicine may enter the school at any time.
For terms of instruction in the Histological, Pathological, Physiological Laboratories under the direction of Professors Satterthwaite, Porter, and G. M. Hammond, application may be made to the Superintendent.

SUMMER TERM.
A general ticket, good for all the clinics and courses, is issued for the summer term, for $75; a monthly ticket, for $30. This term extends from June to September, and instruction is given in all the departments of the School, as well as in the Hospitals to which the Faculty are attached. The hours of instruction are from 9 A.M. until 6 P.M.
Separate courses in the summer term are at half the rate of those courses during the winter term. A ticket for a separate course for the whole summer term will be given for the same fee as one for six weeks during the winter term.

SURGERY.
Professors:
\begin{itemize}
  \item William F. Fluhrer, M.D.
  \item Milton Josiah Roberts, M.D.
  \item Lewis S. Pilcher, M.D.
  \item Seneca D. Powell, M.D.
\end{itemize}

Instructors:
\begin{itemize}
  \item G. R. Elliott, M.D.
  \item John R. Conway, Jr., M.D.
  \item Samuel Lloyd, M.D.
\end{itemize}

Clinical Assistants:
\begin{itemize}
  \item John H. Nesbitt, M.D.
  \item W. J. Fields, M.D.
  \item Stanton Allen, M.D.
  \item E. N. Lowry, M.D.
  \item C. E. Bruce, M.D.
\end{itemize}

CLINICAL AND OPERATIVE SURGERY.
Clinics in this department will be given on Thursdays at Bellevue or Mt. Sinai Hospitals by Dr. Fluhrer, and on Tuesdays and Saturdays at the school by Dr. Pilcher.
Members of this class will have the opportunity of following the details of surgical treatment practised in the wards of Bellevue and Mt. Sinai Hospitals, as well as of witnessing the performance of surgical operations.
The large number of Dispensary patients will be utilized by
Prof. Pilcher in his clinics at the School. Members of the class will have an opportunity of personally examining the patients, and in many instances of carrying out the treatment.

Additional clinics in surgery will be conducted at the School on Mondays, Wednesdays, and Fridays, by Dr. Conway and Dr. Lloyd, instructors in this department.

Courses in operative surgery, each to consist of twelve lessons, will be given under the direction of Prof. Fluhrer and his assistant, on three evenings of each week.

ORTHOPEDIC SURGERY AND MECHANICAL THERAPEUTICS.

On Tuesdays, Thursdays, and Saturdays of each week, Dr. Roberts will give systematic and general clinical demonstrations in orthopedic surgery, illustrating these topics by charts, diagrams, models, casts, normal and pathological specimens, and an abundance of living material.

Special attention will be given to the practical application of orthopedic appliances in the treatment of diseases and deformities.

The clinical demonstrations at the School will be supplemented by special surgical operations in the wards of the hospitals with which Dr. Roberts is connected. Invitations will also be extended to members of the class to see cases of unusual interest occurring in private practice.

Matriculates will be furnished ample facilities for the personal examination of cases, the determination of therapeutic indications, the witnessing and carrying out of these, and the notation of results obtained by treatment.

MINOR SURGERY.

On Wednesdays and Fridays, at 12 o'clock, Dr. Powell will hold a clinic in minor surgery, surgical dressings, and bandaging.

Particular attention will be paid to the application of the various surgical appliances and dressings, and opportunities will be given for each member of the class to perfect himself in the practical details.

The proper application of bandages will be made an important factor in the instruction of this department.

DISEASES OF THE MIND AND NERVOUS SYSTEM.

Professors:

WILLIAM A. HAMMOND, M.D.,
CHARLES L. DANA, M.D.

Associate Professor—GRAEME M. HAMMOND, M.D.

Instructors:

CHARLES H. BROWN, M.D.,
W. M. LESZYNISKY, M.D.

Clinical Assistants:

W. A. SHUFFETZ, M.D.,
R. W. WILCOX, M.D.,
F. M. BANTA, M.D.

On Wednesdays and Saturdays, at 4 P.M., Dr. W. A. Hammond will give a complete clinical and systematic course upon the diseases of the brain and cord, and upon insanity, illustrating his lectures by clinical material in abundance. Students of this branch will have frequent opportunities given them to examine the patients, make diagnoses, and institute treatment.

Professor C. L. Dana will give instruction on Tuesdays and Thursdays at 4 P.M. Particular attention will be paid to the methods of examination and diagnosis in diseases of the nervous system, and to practical therapeutics. Charts and printed schedules will be supplied to the students. The department is fully equipped with the modern instruments of precision, as well as with appliances for treatment.

Dr. G. M. Hammond will hold a clinic on Fridays; and Dr. Brown gives instruction in electro-therapeutics on Mondays.

Matriculates are invited to the Neurological Clinics of the instructor, Dr. Wm. M. Leszynsky, at the Demilt Dispensary, and to those of the Clinical Assistant, Dr. R. W. Wilcox, at the North Eastern Dispensary. These gentlemen will also give personal attention and instruction at the School.

During the past term of 1884–5 there were treated or exhibited by Professors Hammond and Dana at the School, and at the clinics at the North Eastern Dispensary, nearly six hundred patients suffering from nervous diseases of all forms. Matriculates have the privilege of personally examining and closely following the treatment of these cases.

PATHOLOGY, CLINICAL MEDICINE AND THERAPEUTICS.

Professors:

THOMAS E. SATTERTHWAITE, M.D.,
ANDREW H. SMITH, M.D.,
WILLIAM H. PORTER, M.D.,
STEPHEN SMITH BURT, M.D.

Instructors:

H. B. McCARROLL, M.D.,
J. E. BAILEY, M.D.

Clinical Assistants:

W. G. L. BOUTILLIER, M.D.,
JAMES K. CROOK, M.D.,
G. G. VAN SCHALK, M.D.,
LOUIS HEITZMANN, M.D.
PATHOLOGY AND GENERAL MEDICINE.

Dr. Satterthwaite, Director of the Histological and Pathological Laboratory, will give a demonstration on Pathological Anatomy, in the amphitheatre, on Wednesdays, at 5 P.M. The amount of fresh material available for these demonstrations may be gathered from the fact that the proceeds of some two hundred autopsies were utilized during the regular term of 1884-5.

Opportunities will also be given the matriculates for attending post-mortems in various city hospitals. Dr. Satterthwaite will also hold a medical clinic at the School on Saturday, at 11 A.M., or in the wards of the hospital.

CLINICAL MEDICINE AND THERAPEUTICS.

Dr. Andrew H. Smith will hold a weekly clinic in the amphitheatre on Fridays, at 11 A.M. He will also give clinical instructions in the wards of the Presbyterian Hospital, with which he is connected.

The instruction in this department will embrace the diagnosis and treatment of disease, which will be illustrated by the examination and treatment of patients.

Under the head of therapeutics, will be given the comparative action of medicines belonging to the same classes, with hints for the selection of remedies, with a view to given effects. New drugs which have been tested and found valuable will receive special attention.

The course will be thoroughly practical, every-day matters being given the preference over those which are rare and exceptional, and of comparatively little value.

CLINICAL MEDICINE, PATHOLOGY, AND THERAPEUTICS.

Dr. Porter, Professor of Clinical Medicine and Pathology, will hold regular medical clinics in the amphitheatre on Mondays and Wednesdays, at 11 A.M.

Special attention will be given to the diagnosis and treatment of diseases of the kidney and liver, and those of the abdominal cavity; also to their treatment from the standpoint of pathology and clinical experience.

Dr. Porter will also make post-mortem examinations at the Presbyterian Hospital, and members of the class will have an opportunity given them to attend.

PHYSICAL DIAGNOSIS.

Dr. Burt, Professor of Physical Diagnosis, will hold a medi-
the surgeons of the Woman's Hospital, and Profs. Emmet and Hanks will also invite members of the class to assist at operations selected from the clinic, and to witness private operations of particular interest.

ANATOMICAL BASIS OF GYNECOLOGY.

Dr. McKim will lecture once a week on the anatomical basis of gynecology.

The topics discussed will be general embryology, the special development of the genito-urinary apparatus, and the arrest of development in the female generative organs; the anatomy of the female pelvis and contained viscera, and its relations to the diseases of women—i.e., diagnosis, uterine displacements, diseases of ovaries and Fallopian tubes, diseases of bladder and urethra, injuries of the pelvic floor, pelvic cellulitis and peritonitis, new growths, etc.

The lectures will be illustrated by embryos of the chick, microscopic sections, moist females' pelvises with contained viscera, dissections, models, charts, and blackboard drawings.

It is becoming more and more recognized by the profession that gynecology is, in the main, a branch of surgery, and that, like the other branches of this art, gynecology must rest its procedures upon a sure anatomical basis. To give such a practical acquaintance with the female pelvis and its viscera is the purpose of these lectures.

DISEASES OF THE EYE AND EAR.

Professors:
D. B. St. John Roosa, M.D., W. Oliver Moore, M.D.

Instructors:
J. B. Emerson, M.D., W. A. Dayton, M.D., Francis Valk, M.D.

Clinical Assistants:
E. B. Ramsdell, M.D., G. J. Bull, M.D., S. R. Pray, M.D.

Dr. Roosa and Dr. Emerson will hold an ophthalmic and aural clinic at the Manhattan Eye and Ear Hospital, corner of 41st Street and Park Avenue, on Tuesdays, Thursdays, and Saturdays from 2:30 until 4:30 P.M.

Dr. Moore will hold clinics at the School on Wednesday and Friday mornings at 9 A.M. Dr. Moore is at the New York Eye and Ear Infirmary, corner 13th Street and Second Avenue, every Tuesday, Thursday, and Saturday, at 1 P.M., where opportunity is given for clinical instruction.

Dr. Valk will hold an eye and ear clinic at the School, at 3 P.M., on Mondays, Wednesdays and Fridays.

On Friday evenings, at 8 o'clock, Dr. Emerson will give instruction in ophthalmoscopy at the Manhattan Eye and Ear Hospital. On Tuesday from 5 to 6 P.M., otopscopy, with the use of the Eastachian catheter, Politzer's apparatus, and the general treatment of the ear, will be taught by Dr. Dayton at the School.

This course, as conducted by Drs. Roosa and Moore, is one that will give the members of the class an opportunity of seeing the various operations upon the eye and ear, and of learning to adjust glasses, and to use the ophthalmoscope and otoscope, under the personal instructions of the Professors. Besides, ample opportunity is afforded for studying the course of diseases of the eye and ear.

During the last year, more than 2,500 cases of diseases of the eye and ear were utilized for purposes of instruction in this department. Practitioners are not only permitted to study ambulant cases, but also the ward patients at the Post-Graduate and at the Manhattan Eye and Ear Hospital.

OPERATIVE SURGERY OF THE EYE.

Dr. W. O. Moore will give instruction in this department on the cadaver and upon fresh eyes, so that all the operations may be performed by members of the class. The classes will be limited in numbers.

DISEASES OF THE NOSE AND THROAT.

Professor:
Clinton Wagner, M.D.

Associate Professor: George B. Hope, M.D.

Instructor: W. K. Simpson, M.D.

Clinical Assistants:
Charles Hunter, M.D., A. S. Seaman, M.D., W. J. Swift, M.D.

Dr. Wagner, Surgeon in Charge of the Metropolitan Throat Hospital, will hold clinics on Mondays and Fridays, from 2:30 to 4 P.M., at the Hospital, and on Wednesdays, at the same hour, will give a clinical lecture at the School.

On Tuesdays, Thursdays, and Saturdays, from 2:30 to 3:30 P.M., a clinic will be held at the School by Dr. Hope, and also at the Metropolitan Throat Hospital by Dr. Swift.

Instruction in this department will be thoroughly practical. Matriculates will be carefully taught the method of making ex-
aminations, the use of instruments, and making topical applications.

VENEREAL AND GENITO-URINARY DISEASES.

Professor:  
FREDERIC R. STURGIS, M.D.
Associate Professor:  H. G. LYTLE, M.D.
Instructor:  A. F. BUECHLER, M.D.
Clinical Assistant:  F. B. CARPENTER, M.D.

Dr. Sturgis will give a course on Venereal Diseases at the School during the winter session, when the entire subject of venereal diseases will be carefully considered and illustrated by numerous cases.

Clinics will also be held at Charity Hospital during the months of December, January, February, and March, when the ample material of the Hospital wards will be open to the class.

Dr. Lyttle will give a course on Genito-Urinary Diseases at the School, in which the diagnosis and treatment of these affections will be practically taught.

The Instructor to the chair of Venereal and Genito-Urinary Diseases, Dr. Buechler, will also give instruction on these subjects.

Clinical instruction in these diseases will be held daily in the dispensary department.

It is the aim of the Professor of these branches of surgery to make the instruction as purely practical as is consistent with thorough teaching. To this end, particular care will be paid to the clinical side of the course, and as the patients are exhibited the teacher will direct attention to the salient points of each individual case, and to the various opinions held upon the particular disease under discussion.

DISEASES OF THE SKIN.

Professor:  GEORGE HENRY FOX, M.D.
Clinical Assistants:  F. B. CARPENTER, M.D.
ROBT. C. CAMPBELL, M.D.

Clinical instruction in dermatology will be given on Monday, Wednesday and Friday, from 2.30 to 4 P.M., by the Professor of this Department and his assistants.

The abundant clinical material to be found at the School will be supplemented when necessary by rare and interesting cases selected from the Skin Clinic of the College of Physicians and Surgeons, and from the New York Skin and Cancer Hospital.

OBSTETRICS.

Professor:  C. A. VON RAMDOHR, M.D.
Clinical Assistant:  FRED. MATTHEWS, M.D.

The Professor of Obstetrics will direct his special attention to obstetric operations, including obstetric antisepsis, normal and abnormal mechanism, diagnosis of presentations and positions, etc.

The several operations will be performed in the semi-weekly clinics by each member of the class with the aid of the Budin-Pinard manikin, female cadaver, and normal fetus.

Obstetric cases will be given out to members of the class, and every assistance will be given for the necessary operations on the living by the gentlemen connected with this chair.

ANATOMY AND PHYSIOLOGY OF THE NERVOUS SYSTEM.

Professor:  AMBROSE L. RANNEY, M.D.
Demonstrator:  FRANK W. OLDS, M.D.

Dr. Ranney will deliver courses of lectures upon this branch during the term. Each course will comprise twelve lectures. Particular attention will be given to the later discoveries in this field, in so far as they may be applied to the diagnosis of nervous diseases. The theories of functional localization, with special reference to the determination of focal lesions of the brain and spinal cord will be taught, and the symptoms exhibited in the various forms of paralysis will be explained by blackboard drawings, models, and actual sections of the tissues. The clinical significance of pain in various parts of the body will also be discussed and interpreted from an anatomical standpoint. The function of the more important nerves will be demonstrated before the class upon a living subject by means of electric currents.

No effort or expense will be spared to render this course one of the most complete ever offered to the profession.
DISEASES OF CHILDREN.

Instructors:
S. J. McNutt, M.D., Henry D. Chapin, M.D.

Clinical Assistants:
H. Post, M.D., A. B. Hamm, M.D., G. A. Farwell, M.D.

Daily clinics for diseases of children are held by Dr. McNutt and Dr. Chapin. A ward for sick children has been fitted up, and beds endowed by a benevolent lady of New York, during the last year, which will furnish additional material for the study of acute infantile disease.

NAVAL, MILITARY, AND STATE HYGIENE.

Professor:
Edward Kershner, M.D., Surg. U.S.N.

Instructor:
Howard E. Alms, M.D., Assistant Surgeon, U.S.N.

The course will be thoroughly practical, having in view instruction in the preservation of health and prevention of disease in the every-day life of the citizen, soldier, and sailor.

Illustrations by diagrams, drawings, models, and materials of various kinds. This course is given with the full approbation of the Surgeon-General of the Navy, and is the first of the kind instituted in this country, by an officer of one of the medical departments of the Government.

HOSPITAL REPORT.

Although the Hospital of the School has been in operation but one year, the following extract from the circular of the Hospital Fund Committee shows what an importance it has already attained.

STATEMENT.

The managers of the school decided, a little more than a year ago, to further develop the institution by connecting it with a Hospital Department. And they now take pleasure in making a report of the year's work. From the subjoined table, it will be seen that 134 cases have been received up to June 1st. The average stay of each has been four weeks, and each has paid a sum varying from five dollars a week upwards.

</table>
At this time, in particular, funds can be advantageously used in the direction of securing separate wards for men, women and children, and the committee call attention to the fact that no better use can be made of money than by the endowment of a limited number of beds, especially for emergency cases, which otherwise cannot be taken into the Hospital; or for cases where treatment is required of special diseases among the poorer classes, who have not the money to meet the regular hospital charges.

Thus far they are glad to say that the receipts from patients, and by donation, have a little more than met the fixed charges, though they have not covered the gross expenses of the Hospital, the deficit having been made up by contributions from the Physicians who are sustaining the enterprise. Patients of any sort (contagious, infectious, and incurable diseases excluded) are admitted to the Hospital and operations in the whole range of surgery are admissible, specialists of every department in medicine being in daily attendance. It is in this way that the sick have very unusual advantages. The committee, in inviting you to take an active interest in this charity, hope that you will take occasion to visit the institution and acquaint yourself with its practical features. It is also hoped that you will secure the co-operation of your friends.

Five thousand dollars secures to any donor the permanent endowment of a bed for one adult, with the privilege of designating the occupant (in accordance with the Hospital rules).

Three thousand dollars insures the same rights to the donor.

From the above it appears that 63 operations have been performed in the hospital building, and that there have been only seven deaths, a matter of satisfaction considering the magnitude of many of the operations.

At the present time it is thought desirable by the Trustees to secure funds, with which not only to purchase a hospital building in the near future, but also to equip it in accordance with modern requirements and with the best appliances for the detection and treatment of disease.

At this time, in particular, funds can be advantageously used in the direction of securing separate wards for men, women and
Number registered, year ending April 30th, 1885. 4151.

The Superintendent of the School and Hospital is prepared to assist Matriculates in procuring desirable board and lodging. Members of the Profession are cordially invited to visit the School, and acquaint themselves with its methods of instruction.

For further information, address, F. R. STURGIS, M.D., Secretary. 

226 East 20th Street, New York City.

H. MCKEEVER, Superintendent.

H. MCKEEVER, Assistant Secretary.
